

OPTIMASS 6000 **Technical Datasheet**

Sensor for mass flow

- The high performance meter for process industries
- Cryogenic, high temperature and high pressure options
- Supreme liquid and gas performance with CT approval

The documentation is only complete when used in combination with the relevant documentation for the signal converter.

1.1 The solution for extended temperature applications

A high level of performance, together with a wide operating temperature range up to 400°C / 752°F, makes the OPTIMASS 6000 the ideal choice for mass flow measurement in a wide variety of applications.

Designed to meet the requirements of general purpose liquid and gas applications, the extended low temperature range of -200°C / -328°F also makes the 6000 suitable for Liquid Natural Gas (LNG) and cryogenic applications.

Combined with the power of the MFC 400, the OPTIMASS 6000 will provide accurate measurement of volume, mass, density and concentration.

- ① Standard flange process connections available.
- ② Modular electronics with a range of output options.
- ③ Comprehensive diagnostic capabilities.

- ① Remote terminal box

Features:

- Innovative twin V-tube design
- Temperature range -200°C to +400°C
- Optional insulation / heating jacket
- Compact envelope
- Optimised flow divider for minimum pressure loss
- Modular electronics concept: electronics and sensor are easy to replace
- Self draining when mounted vertically
- Stability with entrained gas, even with gas concentrations 0...100%

Industries:

- Water and waste water
- Chemical
- Oil and gas
- Food and beverage
- Pharmaceutical

Applications:

- Crystallising, solidifying and cryogenic products
- Tanker loading
- General purpose applications
- CIP and SIP > 130°C
- Liquid Natural Gas (LNG)
- Supercritical gases

1.2 Features and options

Features

- Available as compact or remote.
- Nominal flow rates up to 1000000 kg/h / 36743 lb/min.
- Self draining, when mounted vertically.
- With advanced Entrained Gas Management (EGM™) the meter maintains operation over a wide range of gas fractions and complex flow conditions.

Connection options

- Standard flanges with ratings up to 1500 lb / PN160.
- Supports a wide range of industry standard hygienic connections.
- Optional sealing faces.
- NAMUR NE132 flange lengths

Heating jacket and purge port

Heating jacket

- For use with temperature dependant products.
- Prevents solidification of process product.
- The heating case can also be used as a cryogenic insulation case.

Purge port

- Allows hazardous chemicals to be drained away safely.

1.3 Meter / converter combinations

Converter	MFC 400		
Configuration	Compact	Remote field	Remote wall
OPTIMASS 6000	6400C	6400F	6400W

1.4 Measuring principle (twin tube)

Meter from the side, showing tube layout

- ① Measuring tubes
- ② Drive coil
- ③ Sensor 1
- ④ Sensor 2

Static meter not energised and with no flow

- ① Measuring tubes
- ② Drive coil
- ③ Sensor 1
- ④ Sensor 2

A Coriolis twin tube mass flowmeter consists of two measuring tubes ① a drive coil ② and two sensors (③ and ④) that are positioned either side of the drive coil.

Energised meter

- ① Measuring tubes
- ② Direction of oscillation
- ③ Sine wave

When the meter is energised, the drive coil vibrates the measuring tubes causing them to oscillate and produce a sine wave ③. The sine wave is monitored by the two sensors.

Energised meter with process flow

- ① Process flow
- ② Sine wave
- ③ Phase shift

When a fluid or gas passes through the tubes, the coriolis effect causes a phase shift in the sine wave that is detected by the two sensors. This phase shift is directly proportional to the mass flow.

Density measurement is made by evaluation of the frequency of vibration and temperature measurement is made using a Pt500 sensor.

2.1 Technical data

- The following data is provided for general applications. If you require data that is more relevant to your specific application, please contact us or your local sales office.
- Additional information (certificates, special tools, software,...) and complete product documentation can be downloaded free of charge from the website (Downloadcenter).

Measuring system

Measuring principle	Coriolis mass flow
Application range	Mass flow and density measurement of fluids, gases and solids
Measured values	Mass, density, temperature
Calculated values	Volume, referred density, concentration, velocity
Sensor model range	
Stainless Steel 316L 08...250	Compact / remote 100 barg @ 20°C / 1450 psig @ 68°F, temp. range -70°C...+230°C / -94°F...+446°F
	Remote only 100 barg @ 20°C / 1450 psig @ 68°F, temp. range -50°C...+400°C / -58°F...+752°F
	Remote only 100 barg @ 20°C / 1450 psig @ 68°F, temp. range -200°C...+40°C / -364°F...+104°F
Hastelloy® 08...80	Compact / remote 200 barg @ 20°C / 2900 psig @ 68°F, temp. range -70°C...+230°C / -58°F...+446°F
Duplex Stainless Steel 100...200	Compact / remote 200 barg @ 20°C / 2900 psig @ 68°F, temp. range -50°C...+230°C / -58°F...+446°F

Design

Basic	System consists of a measuring sensor and a converter to process the output signal
Features	Fully welded maintenance free sensor with twin V-shaped measuring tube
Variants	
Compact version	Integral converter
Remote version	Available with field or wall versions of the converter

Measuring accuracy

Mass (standard)	
Liquid (≥ 20:1 of nominal flow rate)	±0.1% of actual measured flow rate
Liquid (< 20:1 of nominal flow rate)	±zero stability (see zero stability below)
Gas	±0.35% of actual measured flow rate + zero stability
Mass (optional) ①	
Liquid (≥ 10:1 of nominal flow rate)	±0.05% of actual measured flow rate
Liquid (< 10:1 of nominal flow rate)	± zero stability (see zero stability below)
Repeatability	
Liquid	Better than 0.05% plus zero stability (includes the combined effects of repeatability, linearity and hysteresis)
Gas	Better than 0.2% plus zero stability (includes the combined effects of repeatability, linearity and hysteresis)

Zero stability		
Meter size	Standard temperature	High temperature
08	< 0.03 kg/h	< 0.05 kg/h
10	< 0.06 kg/h	< 0.10 kg/h
15	< 0.19 kg/h	< 0.30 kg/h
25	< 0.95 kg/h	< 1.52 kg/h
50	< 1.8 kg/h	< 2.8 kg/h
80	< 3.9 kg/h	< 6.24 kg/h
100	< 8.8 kg/h	< 14.0 kg/h
150	< 16.0 kg/h	< 25.6 kg/h
200	< 30.0 kg/h	< 44.0 kg/h
250	< 50.0 kg/h	< 80.0 kg/h
Reference conditions		
Product	Water

High temperature range		
All materials sizes 08...250	0.008% of nominal flow per 1°C / 0.0044% of nominal flow per 1°F	
Pressure effect on mass flow rate		
All materials sizes 08...50	0.005% per 1 barg / 0.00034 % per 1 psig	
All materials sizes 80...100	0.0055% per 1 barg / 0.00038 % per 1 psig	
All materials sizes 150...250	0.008% per 1 barg / 0.00055 % per 1 psig	
Density		
Measuring range	100...3000 kg/m ³ / 6...187 lb/ft ³	
Accuracy	±1 kg/m ³ / ±0.06 lb/ft ³	
On site calibration	±0.2 kg/m ³ / ±0.012 lb/ft ³	
Process temperature effect	0.015 g/l per 1°C / 0.0083 g/l per 1°F	
Temperature		
Accuracy	± 0.5°C / ±0.9°F (± 0.5% of reading)	

Operating conditions

Nominal flow rates (1 barg / 14.5 psig pressure drop)	
08	600 kg/h / 22 lb/min
10	1200 kg/h / 44 lb/min
15	3800 kg/h / 139 lb/min
25	19000 kg/h / 698 lb/min
50	35000 kg/h / 1286 lb/min
80	78000 kg/h / 2866 lb/min
100	175000 kg/h / 6430 lb/min
150	320000 kg/h / 11758 lb/min

200	550000 kg/h / 20209 lb/min
250	1000000 kg/h / 36743 lb/min
	Assumes operating density 1000 kg/m ³ / 62.4 lb/ft ³
	For Hastelloy® meters, assume a pressure drop of 1.15 barg
Maximum flow rates	
All meters	150% of nominal flow rate

Environmental

③ All temperature and pressure ranges

- DN08...50 (axial) loads have been calculated, based on 316L schedule 40 process pipework, where un-radiographed butt welds have been used in pipe joints.
- DN80...250 (axial) loads have been calculated, based on 316L schedule 80 process pipework, where un-radiographed butt welds have been used in pipe joints.
- The loads shown are the maximum permitted static load. If loads are cycling (between tension and compression) these loads should be reduced. For advice, consult the manufacturer.

2.2 Measuring accuracy

X nominal flow rate [%]

Y measuring error [%]

① Standard measuring accuracy

② Optional measuring accuracy (not available in SIL mode)

Measuring error

The measuring error is obtained from the combined effects of accuracy and zero stability.

Reference conditions

Product	Water
Temperature	+20°C / +68°F
Operating pressure	1 barg / 14.5 psig

2.3 Guidelines for maximum operating pressure

Always make sure that the meter is used within its operating limits.

Pressure / temperature de-rating (metric) for meters with SS 316 measuring tubes. Standard temperature range.

X temperature [°F]
Y pressure [psig]

Pressure / temperature de-rating (metric) for meters with SS 31803 and Hastelloy® C22, PED certified measuring tubes. Standard temperature range

X temperature [°C]
Y pressure [barg]

- ① PED / CRN H08...80
- ② CRN D100...150
- ③ CRN D200

Pressure / temperature de-rating (imperial) for meters with SS 31803 and Hastelloy® C22, PED certified measuring tubes. Standard temperature range.

X temperature [°F]
Y pressure [psig]

- ① PED / CRN H08...80
- ② CRN D100...150
- ③ CRN D200

Pressure / temperature de-rating (metric) for meters with SS 316, PED certified measuring tubes. Cryogenic temperature range.

X temperature [°C]
Y pressure [barg]

Pressure / temperature de-rating (imperial) for meters with SS 316 measuring tubes PED certified. Cryogenic temperature range.

X temperature [°F]
Y pressure [psig]

Flanges

- DIN flange ratings are based on EN 1092-1 2007 table G.4.1 material group 14EO
- ASME flange ratings are based on ASME B16.5 2003 table 2 material group 2.2
- JIS flange ratings are based on JIS 2220: 2001 table 1 division 1 material group 022a
- JIS 10K flanges are limited to a maximum temperature of 300°C / 572°F

Pressure / temperature de-rating (metric) for meters with hygienic connections.

X temperature [°C]
Y pressure [barg]

- ① SMS 1...1½", DIN 11851 DN10...40
- ② SMS 2", Tri-clamp DN10...40, DIN 11864-2 DN10...40, DIN 11851 DN50...65
- ③ SMS 3", Tri-clamp DN50...65, DIN11864-2, DIN11864-2 DN50...100, DN11851 DN80...100
- ④ SMS 4", Tri-clamp DN80...100

Pressure / temperature de-rating (imperial) for meters with hygienic connections.

X temperature [°F]

Y pressure [psig]

① SMS 1...1½", DIN 11851 DN10...40

② SMS 2", Tri-clamp DN10...40, DIN 11864-2 DN10...40, DIN 11851 DN50...65

③ SMS 3", Tri-clamp DN50...65, DIN11864-2, DIN11864-2 DN50...100, DN11851 DN80...100

④ SMS 4", Tri-clamp DN80...100

Notes

- The maximum operating pressure will be either the flange / hygienic connection rating or the measuring tube rating, **WHICHEVER IS THE LOWER!**
- For hygienic applications above 10 bar, connection sizes DN25...100 / 1...4" are limited to the measurement of liquid at the pressures shown in the above table.
- The maximum pressure for steam cleaning is 10 bar / 145 psi.
- For other applications above 10 bar / 145 psi, please contact the manufacturer.
- The manufacturer recommends that the seals are replaced at regular intervals. This will maintain the hygienic integrity of the connection.

2.4 Dimensions and weights

2.4.1 Flanged versions

3.1 Intended use

This mass flowmeter is designed for the direct measurement of mass flow rate, product density and product temperature. Indirectly, it also enables the measurement of parameters like total mass, concentration of dissolved substances and the volume flow. For use in hazardous areas, special codes and regulations are also applicable and these are specified in a separate documentation.

Responsibility for the use of the measuring devices with regard to suitability, intended use and corrosion resistance of the used materials against the measured fluid lies solely with the operator.

This device is a Group 1, Class A device as specified within CISPR11:2009. It is intended for use in industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments, due to conducted as well as radiated disturbances.

The manufacturer is not liable for any damage resulting from improper use or use for other than the intended purpose.

3.2 Mounting restrictions

3.2.1 General installation principles

There are no special installation requirements but you should note the following points:

- Support the weight of the meter as close to the meter body as possible.
- Mount the meter in such a way to avoid the build up of gas or liquid in the measuring tube.
- Straight runs either side of the meter are not required.
- The use of reducers and other fittings at flanges, including flexible hoses, is allowed but you should take care to avoid cavitation.
- Avoid extreme pipe size reductions.
- Meters are not affected by crosstalk and can be mounted in series or in parallel.
- Avoid mounting the meter at the highest point in the pipeline where air / gas can collect.

Mounting positions

- ① The meter can be mounted at an angle but it is recommended that the flow is uphill.
- ② Avoid mounting the meter with the flow running downhill because it can cause siphoning. If the meter has to be mounted with the flow running downhill, install an orifice plate or control valve downstream of the meter to maintain backpressure.
- ③ Horizontal mounting with flow running left to right.
- ④ Avoid mounting meter with long vertical runs after the meter as it can cause cavitation. Where the installation includes a vertical run after the meter, install an orifice plate or control valve downstream to maintain backpressure.
- ⑤ The meter can be mounted vertically but it is recommended that the flow is uphill.
- ⑥ Avoid mounting the meter vertically with the flow running downhill. This can cause siphoning. If the meter has to be installed this way, install an orifice plate or control valve downstream to maintain backpressure.

Comprehensive installation guidance is provided in the Handbook
