

Advantage-D Oil-less Medical/Industrial Central Vacuum Systems

Central Vacuum Systems for Medical Applications | Surgical and Industrial Applications.

Central systems in our Advantage-D line consist of 100% oil-less pumps. These dry centralized systems require very little maintenance with cool and quiet operation. As a result, they fit the requirements of many medical, surgical, and industrial applications.

Meet NFPA 99 Requirements

The systems in our Advantage-D line are most appropriate for applications that involve air or inert gases or moderate amounts of water vapor. Additionally, they work for those applications which require operating vacuum levels from atmosphere to as high as 27" Hg.

Highly Customizable, Easy to Use

Becker Engineers have thought of every detail in order to make our systems fit your needs and your space. Indeed, most models in this line can fit through standard 36" doorways. They are also available in different configurations for your needs and space allotments. For example, different configurations and customizations include the following options:

- **Tank mounted or modular/expandable arrangements**
- **Field expandable up to six pumps**
- **18 CFM to over 2600 CFM capacities**
- **Automatic alternating, cascading controls**

Need more help finding the right central vacuum system for your medical applications?

Put our team to work for you. Contact our office – [\(800\)752-0556](tel:8007520556) or email us at info@control-specialties.com today for help. We'll help you find the right solution for all your requirements.
