

## HOW TO FIND PARTS BY PUMP TYPE & SERIAL NO.

- To identify the correct parts for your pump, locate the Pump Tag. You will need the Pump Type and the first letter in the Serial Number.
- The letter indicates the pump generation.
- No letter in the Serial Number indicates your pump is the original or only design iteration\*

\* Becker Serial Numbers are shown as “No” on the Pump Tag and always originate with a 7-digit number for each Pump Type of a brand new Pump Series (Ex: 1234567). The next generation of that Pump Type begins with the Index Letter A followed by 7 numbers (Ex: A1234567). The next generation of that Pump Type starts with the Index Letter B followed by 7 numbers and continues in that manner for the duration of that Series of pump.

Becker is a leading manufacturer of vacuum pumps, compressors and regenerative blowers. They offers a variety of industrial pump types that cover a wide range of operating pressures from atmospheric to 0.5 torr (29.9 in. Hg).
